

Fig. S1. Mean density of seven fish families across years and management zones (a) pooled for the whole coast and (b) Shimoni. Due to missing data in Shimoni, surveys from the next nearest Fished sites, in Diani-Chale, (CORDIO 2001-2002) were added. Mean densities (+/- SE) are calculated from 8 studies for whole coast and 4 studies for Shimoni area (see Table 1). * = data not collected. The number of stars represents the number of missing data per management category.

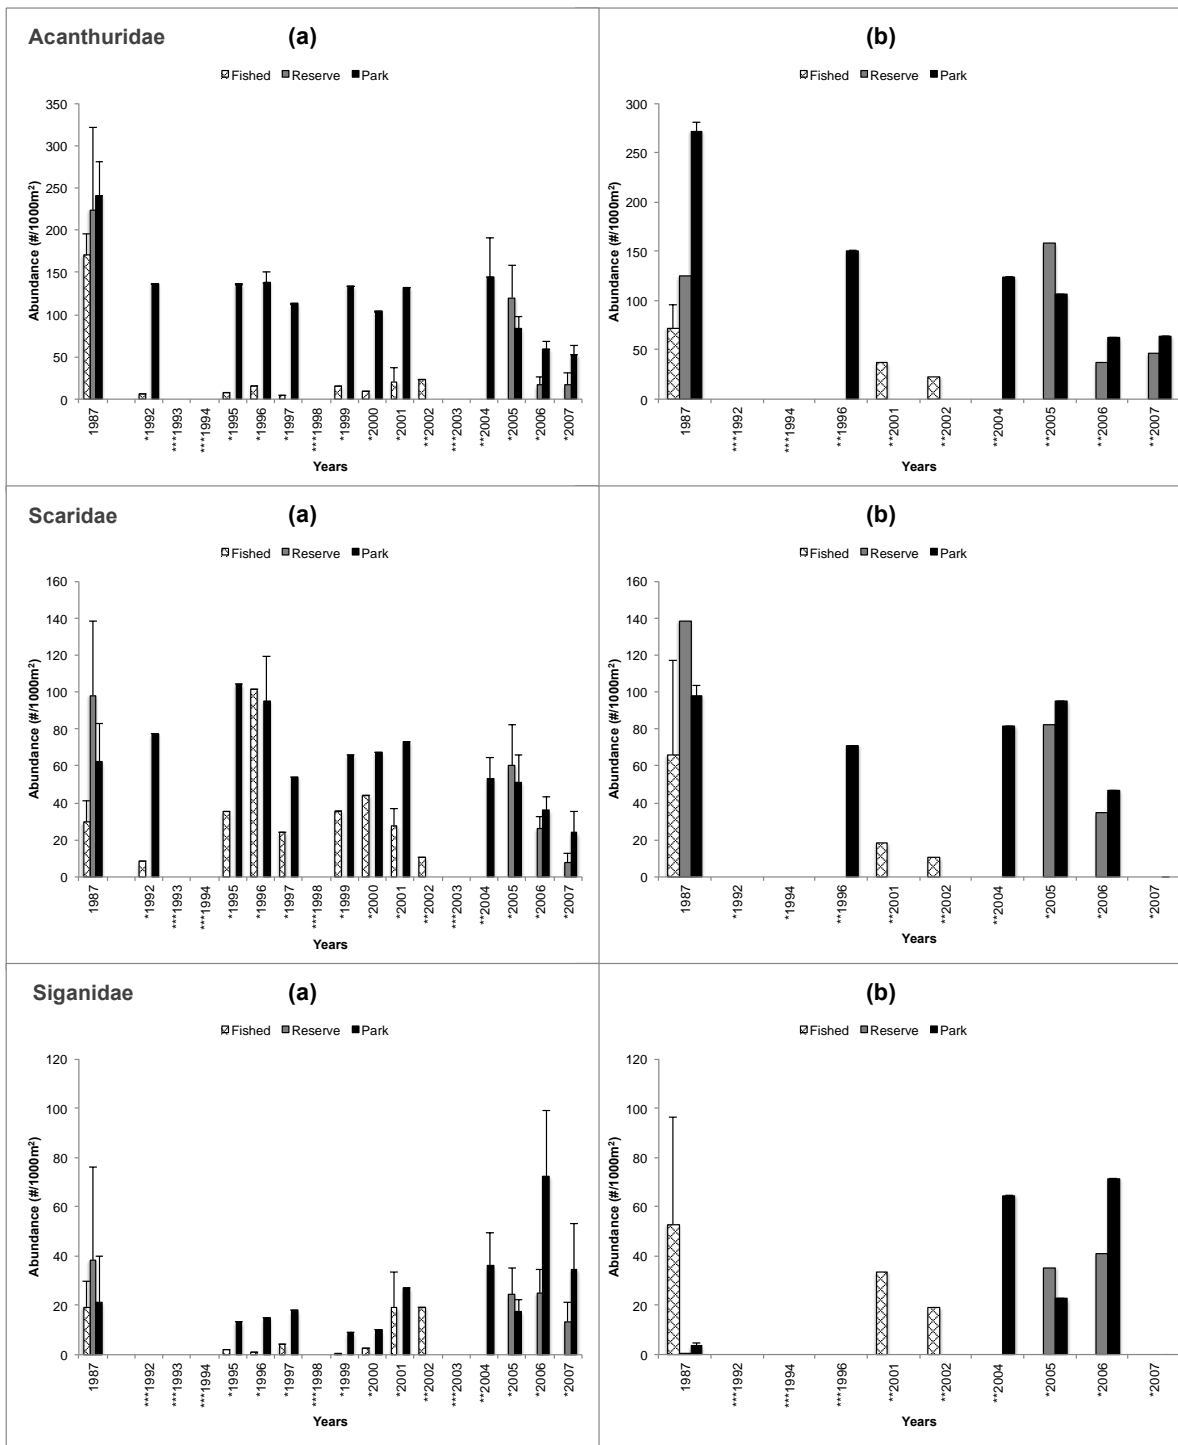

Fig S1. Continued.
